Using this fun preschool activity: sprouts in a transparent glass clearly show seed germination and how the seeds grow roots, stem, and eventually bloom. If you'd like to make your own sprouts in transparent glass, please keep reading. In this experiment, we used Methi seeds/Coriander seeds as they are one of the quickest growing seeds. The Methi seeds/ Coriander seeds serve as the seeds for the plants that produce them. Using a wet paper towel and placing some seeds on the towels will cause the dampness to settle into the seeds. The moisture and humidity will then start the process of germination and soon you will see the roots and stem naturally grow. It's a pretty cool greenhouse! Kids can visually monitor and watch as they grow taller and taller. Children can count the number of seeds sprout in the jar would be fun maths learning for them.</p>
